SUMMARY

Backend-focused Software Engineer with hands-on experience designing and building scalable backend systems, RESTful APIs, and database architectures using Node.js, Express, Django, MongoDB, and PostgreSQL. I have worked on freelance and client-based projects involving backend services, authentication systems, SaaS platforms, real-time systems, and third-party integrations, alongside modern frontends using React and Next.js. I have direct client communication and full project lifecycle experience, including requirements gathering, system architecture, development, testing, and deployment. I am also actively developing my skills in Machine Learning, AI Agents, and automation, with a focus on building intelligent backend systems.

SKILLS

Backend: Node.js, Express.js, Django, Django REST Framework, REST APIs

Databases: PostgreSQL, MongoDB, MySQL, Redis

Languages: JavaScript, TypeScript, Python, Java, SQL

Frontend: React, Next.js, React Native, HTML5, CSS3, Tailwind CSS, Bootstrap

AI / ML / Automation: Machine Learning, LLM Integration, AI Agents, RAG, Workflow Automation (n8n), Pandas, NumPy, Scikit-learn

Tools & DevOps: Git, GitHub, Docker, Celery, RabbitMQ, Socket.IO, Stripe, QuickBooks API, OAuth 2.0

EXPERIENCE

Software Engineer — Nexovyre, Lahore, Pakistan

August 2026 – Present

- Design and build AI-powered software solutions combining Machine Learning, LLMs, AI Agents, and RAG with full-stack web development.
- Build end-to-end web applications and backend systems using the MERN stack, Django, and REST APIs for client-focused products.
- Lead technical planning and architecture decisions across software and AI initiatives, collaborating directly with clients on requirements.

Full Stack Developer (Contract) — Self-Employed, Remote

March 2026 – Present

- Deliver full-stack web, mobile, SaaS, and AI-integrated applications for clients, translating requirements into scalable solutions.
- Design backend systems and RESTful APIs using Node.js, Express.js, Django, PostgreSQL, and MongoDB; build responsive frontends with React and Next.js.
- Manage end-to-end development lifecycles, including requirements gathering, architecture, testing, deployment, and maintenance.

Freelance Software Engineer — Self-Employed, Remote

November 2025 – Present

- Provide full-stack and backend development services using the MERN stack and Django, including RESTful APIs and authentication systems.
- Collaborate directly with clients to gather requirements, communicate progress, and deliver solutions within agreed timelines.

PROJECTS

DRIP — Fashion Reels, Mobile & E-Commerce Platform

June – July 2026

github.com/hassanshehzad1/Drip-Fashion-Outfit-Suggestion-

- Developed a fashion discovery platform combining short-form outfit reels, mobile-first shopping, and AI-driven outfit recommendations.
- Built responsive, mobile-friendly interfaces and RESTful APIs (React, Node.js, Express.js, MongoDB) supporting core app and mobile workflows.

Electric Scooty Showroom Management System (MASTER AUTO ESM)

June 2026

github.com/hassanshehzad1/ERP_ESM

- Built an offline Windows desktop ERP for showroom operations using Electron, React 19, Vite, and TypeScript, with modules for inventory and sales.

Rideo — Ride-Sharing Platform

January 2026

github.com/hassanshehzad1/Rideo

- Developed a full-stack ride-sharing platform with real-time ride requests and captain management using React, Vite, Tailwind CSS, and Node.js.

Real Estate ERP — AI-Powered SaaS Platform

April 2026

erp-real-estate.binovalogics.com

- Engineered a multi-tenant Real Estate SaaS ERP with role-based access control for Admin, Finance, and Sales workflows.
- Developed an installment engine (monthly/quarterly/annual/balloon plans) with automated overdue detection and QuickBooks integration via OAuth 2.0.
- Built async background processing with Celery/Redis and 40+ REST API endpoints (Django REST Framework + Next.js) with full accounting workflows.

EDUCATION

Bachelor's Degree in Computer Science — GIFT University, Gujranwala, Punjab

April 2024 – August 2028

GPA: 3.71 / 4.00 — Full 4-year merit scholarship

CERTIFICATIONS

- Meta Full Stack Developer Professional Certificate – Meta / Coursera
- Meta Back-End Developer Professional Certificate – Meta / Coursera
- Backend Engineering with Node.js – LearnKartS
- CS50: Introduction to Computer Science – Harvard University
- APIs – Meta · Django Web Framework – Meta
- Introduction to Databases for Back-End Development – Meta
- Node.js & Express.js Foundations – LearnKartS
- Programming in Python – Meta · React Basics – Meta
- Programming with JavaScript – Meta · Version Control – Meta
- Back End Development and APIs – freeCodeCamp
- Front End Development Libraries – freeCodeCamp

ACHIEVEMENTS

- Participant, Harvard T.H. Chan Hackathon 2026 – Harvard T.H. Chan School of Public Health
- Certificate of Participation, InnovateX Hackathon – Brackets Pvt. Ltd. in collaboration with GIFT University
- Head/Leadership Role, GIFT University Blood Donation Camp
- Certificate of Appreciation for Outstanding Achievement – Aspire Group of Colleges, Sialkot

AI / ML / AUTOMATION – CONTINUOUS LEARNING

- Mathematics for Machine Learning and Data Science – DeepLearning.AI · Calculus for Machine Learning and Data Science – DeepLearning.AI
- Supervised Machine Learning: Regression and Classification – DeepLearning.AI
- Machine Learning Pipelines with Azure ML Studio – Coursera
- Intermediate Machine Learning – Kaggle · Intro to Machine Learning – Kaggle
- Pandas for Data Analysis – Kaggle · Data Analysis with Python – freeCodeCamp
- Workflow Automation with n8n: Logic, Data & Error Handling – LearnKartS

INTERESTS

Passionate about the future of Machine Learning, AI Agents, and workflow automation (n8n) — focused on building intelligent, autonomous systems that streamline real-world business processes.
