SUMMARY

Full Stack Software Engineer with hands-on experience building and delivering client-facing web, SaaS, and AI-powered applications. Backend-focused with expertise in Node.js, Express.js, Django, Django REST Framework, PostgreSQL, MongoDB, React, and Next.js. Experienced across the full software development lifecycle, including requirements gathering, system design, API development, database architecture, testing, deployment, and direct client collaboration. Delivered production-oriented solutions including a multi-tenant AI-powered Real Estate SaaS ERP with QuickBooks integration, accounting workflows, background processing, and role-based access control. Currently expanding expertise in Machine Learning, AI Agents, LLM applications, RAG, and workflow automation.

EXPERIENCE

Software Engineer — Nexovyre

nexovyre

August 2026 - Present, Lahore, Punjab, Pakistan

- Design and develop AI-powered software solutions using Machine Learning, Large Language Models (LLMs), AI Agents, Retrieval-Augmented Generation (RAG), and full-stack technologies to address real-world business requirements.
- Build end-to-end web applications and backend systems using the MERN stack, Django, REST APIs, and modern frontend frameworks.
- Design scalable application architectures, database systems, APIs, and automation workflows for client-focused software solutions.
- Lead technical planning, architecture decisions, project execution, and quality standards across software and AI initiatives.
- Collaborate directly with clients to understand requirements, define technical solutions, and translate business needs into production-oriented applications.
- Contribute to team leadership and development practices while evaluating emerging AI technologies for practical software applications.

Project-Based Developer

Self-Employed

March 2026 - Present, Remote

- Delivered full-stack web, mobile, SaaS, and AI-powered applications for clients, translating business requirements into scalable software solutions.
- Designed and developed backend systems and RESTful APIs using Node.js, Express.js, Django, Django REST Framework, PostgreSQL, and MongoDB.
- Engineered responsive web applications using React, Next.js, TypeScript, and Tailwind CSS with maintainable and reusable frontend architectures.
- Integrated AI-powered features, intelligent automation, AI agents, and Machine Learning capabilities into applications to support data-driven business workflows.
- Managed end-to-end software development lifecycles, including requirements gathering, architecture design, development, testing, deployment, and maintenance across client projects.
- Led direct client communication, technical planning, project coordination, and solution delivery to ensure software aligned with business requirements and project objectives.

Freelance Software Engineer

Self-Employed

November 2025 - Present, Remote

- Delivered full-stack web, mobile, and AI-powered applications for clients, translating business requirements into production-ready software solutions.
- Designed and developed full-stack applications using MongoDB, Express.js, React, and Node.js (MERN), along with Django for backend development.
- Engineered RESTful APIs, database architectures, authentication systems, and backend services with a focus on maintainability, security, and performance.
- Integrated AI, Machine Learning, intelligent automation, and AI-powered features into applications to support data-driven functionality and business workflows.
- Managed complete software development lifecycles, from requirements gathering and technical planning through development, testing, deployment, and maintenance.
- Collaborated directly with clients to gather requirements, define technical solutions, communicate project progress, resolve technical issues, and deliver solutions within agreed timelines.

PROJECT

Real Estate ERP — AI-Powered SaaS Platform

Client Project • hassanai-portfolio.netlify.app/ • April 2026 - Present

- Engineered and delivered a production-grade AI-powered Real Estate SaaS ERP for a client, supporting property operations through a multi-tenant architecture.
- Designed tenant-isolated architecture with role-based access control for Admin, Finance, and Sales workflows.

- Developed an installment schedule engine supporting monthly, quarterly, half-yearly, annual, and balloon payment structures with automated overdue detection.
- Integrated QuickBooks using OAuth 2.0, customer synchronization, and payment synchronization workflows to connect ERP operations with accounting processes.
- Implemented accounting capabilities including chart of accounts, invoices, journal entries, fiscal year management, transaction balances, and PDF account statements.
- Built asynchronous background processing with Celery and Redis and developed 40+ REST API endpoints using Django REST Framework for the Next.js frontend.

DRIP Fashion — E-Commerce Platform

Client Project • github.com/devmuhammadadil/erp-real-estate • April 2026 – July 2026

- Developed a full-stack fashion e-commerce platform for a client, translating business requirements into a functional online shopping experience.
- Designed and implemented responsive frontend interfaces focused on usability, product discovery, and cross-device compatibility.
- Developed backend functionality and RESTful APIs to support core application workflows and data management.
- Implemented database-driven features to manage products, users, and e-commerce application data.
- Integrated frontend and backend services to provide a seamless application experience across key customer workflows.
- Managed development, testing, debugging, and deployment activities throughout the project lifecycle.

RIDEO — Client Project

Client Project • January 2026 – August 2025

- Developed a full-stack RIDEO platform for a client, translating business requirements into a functional and scalable software solution.
- Designed responsive user interfaces using modern frontend technologies with a focus on usability and cross-device compatibility.
- Developed backend functionality and RESTful APIs to support core platform workflows and application data.
- Implemented database-driven features for managing users, application data, and platform operations.
- Integrated frontend components with backend services to deliver a seamless end-to-end application experience.
- Managed development, testing, debugging, and deployment activities throughout the project lifecycle.

EDUCATION

Bachelor's Degree in Computer Science

GIFT University • Gujranwala, Punjab, Pakistan • 2027 • 3.71 / 4.00

- Awarded full scholarship for 4 years due to grades.

SKILLS

Python, JavaScript, TypeScript, Java, SQL

React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive Web Design

Node.js, Express.js, Django, Django REST Framework, REST APIs

MongoDB, PostgreSQL, Prisma, Neon

Machine Learning, Artificial Intelligence, LLM Applications, AI Agents, RAG, Data Science

Git, GitHub, Docker, WSL2, Redis, Celery, Vite

QuickBooks API, Stripe, OAuth 2.0, JWT

REST API Development, SaaS Architecture, Multi-Tenant Architecture, Role-Based Access Control, Database Design, Background Processing, Software Testing, API Integration
